Khaveer Narsai

okay cool just play with it talk through what you're thinking what you're seeing.

Daniel

Okay,

Khaveer Narsai

and any frustrations or anything else like that just let us know what's going on

Daniel

so,

let's role play this. I'm in a food court and I got a plate of food and drink

a napkin and some knives and forks. All right,

so.

Bottle, coffee cup or let's say I have a bottle of water.

Is the bottle clean? Yes, this water

what material is your bottle made out of plastic?

separate the items and put them in a bin bottle in bin three lid and been three ah easy.

Khaveer Narsai

so what happens at this screen here, the those would be certain colors and those colors would associate to the bin lighting up to matcht,

Daniel

right

Khaveer Narsai

And then as you put items in the correct bin, lights would move towards the tree at the end adding leaves to the tree. Okay,

Daniel

so now I have motorcycle plate and cutlery

is a progress clean no it had food on, them, please put the items in the bin, bin five okay.

And I imagine I would light up the same

Khaveer Narsai

Yeah. So when it comes to sell food like food on it, it goes straight into the rubbish because there's nothing we really can do about it. Okay.

Daniel

Yeah, can't you wash them?

is that a thing that could be done.

Khaveer Narsai

Not really not in like a food court specific area. We didn't want to have a kitchen in a food court and have to deal with that mess.

Daniel

Why if you chuck your stuff into a bin which has running water.

And the water claims the plate

Khaveer Narsai

messy. And thinking about it. It's like you've got stuff. We got to think about where this world is coming from how we gonna recycle it and sorted So the stuff already go to landfill anyway because the process is a little too hard to like around it. Okay. So the aim is to teach you how to recycle everything else that you make a mistake with.

Daniel

and final thing would be napkins.

So is the product clean?

Yes. No all I wiped my mouth on. Is that clean?

that's being used. Please put the item in a bit. Okay. Sure.

Okay, so recycled everything.

I should have clicked finish. So

I said you no, and then finish.

Use a tree.

Tree.

Khaveer Narsai

Yeah.

Daniel

Okay.

Khaveer Narsai

So you see the tree of What's going on? Yeah. Is there anything? So looking at the whole thing, this whole situation, what do you think

Daniel

it's a good idea. The annoying part of that I find is that you have to do it item by item individually. What if I could do it on a second McDonald system and have it select all the items, so I could select all the items that I want to dispose and it would I guess it would then automatically align in a specific order like chalk The food here, then put the cup here then put the plate there. So that way it's more structured as to how you get rid of it. And I guess it'd be more streamline to take less time going back and forth from menu to menu . I don't know I guess some way of making it more interactive or

more fun.

Because I mean like it being specific menus and understandably pictures is like super do this. Do that.

Yeah. very structured very rigid.

Khaveer Narsai

x y z process. Yeah. tells you exactly what to do and how to

Daniel

Yeah, like the flashing lights and stuff would make a cool like put your stuff in this bin. But maybe that gimmick in a food court would become like the first few times you use it will be interesting but as you use it become more eh just chuck it in a red bin. Yeah. The concept of the tree is cool because it shows you that you're actually contributing shows everyone else has contributed. So it's not

that makes you feel like it's less than just you putting in the effort and more of everyone.

Khaveer Narsai

 Yeah.

Daniel

Yeah. thats it.
